

Dashboard 1: Executive SLA & Carrier Performance Report

Objective

- Provide leadership with a high-level overview of current SLA performance.
- Enable quick identification of risky carriers, routes, and transport modes.
- Support fast, data-driven operational decisions.

Executive KPI Summary

- Total Shipments – Overall logistics volume.
- SLA Breach Rate (%) – Percentage of delayed shipments.
- On-Time Delivery Rate (%) – Service reliability indicator.
- Average Delivery Delay – Severity of delay impact.
- Average Shipping Cost – Operational cost benchmark.

Carrier Performance Insights

- Compare SLA breach rates across carriers.
- Identify high-risk vendors requiring intervention.
- Detect stable, high-volume strategic partners.

Transport Mode Analysis

- Assess reliability differences across Road, Air, Sea, etc.
- Understand cost vs performance trade-offs by mode.

Route-Level Risk View

- Identify origin-destination routes with repeated delays.
- Detect structural bottlenecks or region-specific instability.

Cost vs Reliability Findings

- Compare cost of breached vs on-time shipments.
- Determine whether higher cost improves reliability.

Business Outcome

- Immediate visibility into SLA health.
- Clear identification of operational risks.
- Improved vendor and route management decisions.
