

Dashboard 5: Strategic Optimization & Decision Recommendation Report

Objective

- Convert SLA analytics and ML insights into strategic business actions.
- Identify high-risk concentration areas across carriers, routes, and modes.
- Recommend actionable decisions to improve SLA performance and reduce financial exposure.

Strategic KPI Summary

- Total Shipments at Risk – High-risk classified shipments.
- Percentage of Shipments Requiring Action – Share of volume needing intervention.
- Avoidable SLA Penalty – Estimated financial impact that can be mitigated.
- Total Risk Exposure – Cost exposure weighted by predicted SLA risk.
- Potential SLA Improvement – Estimated improvement if mitigation actions are executed.

Carrier Optimization Matrix

- 2x2 Quadrant view based on Risk Score (X-axis) and Shipment Volume (Y-axis).
- High Risk + High Volume → Replace or Renegotiate.
- High Risk + Low Volume → Monitor closely.
- Low Risk + High Volume → Strategic partner alignment.
- Low Risk + Low Volume → Stable performance.

Route Rationalization Insight

- Routes ranked by Risk Impact (Risk Score × Volume).
- Top-ranked routes require redesign, rerouting, or proactive mitigation.
- Supports network optimization and regional performance strategy.

Mode Optimization View

- Comparison of average risk score and average cost by transport mode.
- Identifies expensive & risky modes vs stable & cost-efficient modes.

- Supports modal shift and cost-risk balancing decisions.

Risk Driver Impact

- Highlights dominant risk drivers such as route volatility or carrier instability.
- Helps leadership prioritize structural improvements instead of reactive fixes.

Strategic Recommendations

- Renegotiate contracts with high-risk, high-volume carriers.
- Reduce allocation on high-risk air routes and consider rail/sea alternatives.
- Increase allocation to low-risk strategic partners.
- Proactively mitigate disruption-heavy corridors.

Business Outcome

- Improved SLA reliability and service stability.
- Reduced financial exposure from avoidable penalties.
- Data-driven transformation roadmap.
- Alignment between operational performance and strategic planning.
